About this Report

This report was produced by Tennesseans for Quality Early Education (TQEE), with support from Dr. Clive Belfield, Ph.D. and Zogby Analytics.

Tennesseans for Quality Early Education is a statewide, bipartisan nonprofit that unites business, elected leaders, law enforcement, faith, education and civic organizations and people in communities across Tennessee to make high-quality early learning, birth through third grade, an urgent policy priority.

Dr. Clive Belfield, Ph.D. is a Professor of Economics at the City University of New York and an Economist with the Center for Benefit-Cost Studies in Education, Teachers College, Columbia University. He was commissioned by TQEE to produce *The Economic Consequences of Insufficient Child Care on Working Families across Tennessee* on which this report is based.

Zogby Analytics was commissioned by TQEE to conduct a new survey of Tennessee parents with a child under age 5. The survey is large-scale, new (administered June 8, 2019 through July 9, 2019), and has a sampling frame that matches to Tennessee household demographics (race, age, family size), labor market conditions in Tennessee (earnings, sector of work), and regional populations. Based on a confidence interval of 95%, the margin of error for the 2,330 surveys is +/- 2.0 percentage points.

Executive Summary

Talk to most Tri-Cities parents of children under age 5, and you're likely to hear how difficult it is to find child care that's accessible, affordable, and of sufficient quality to support their child's school readiness.

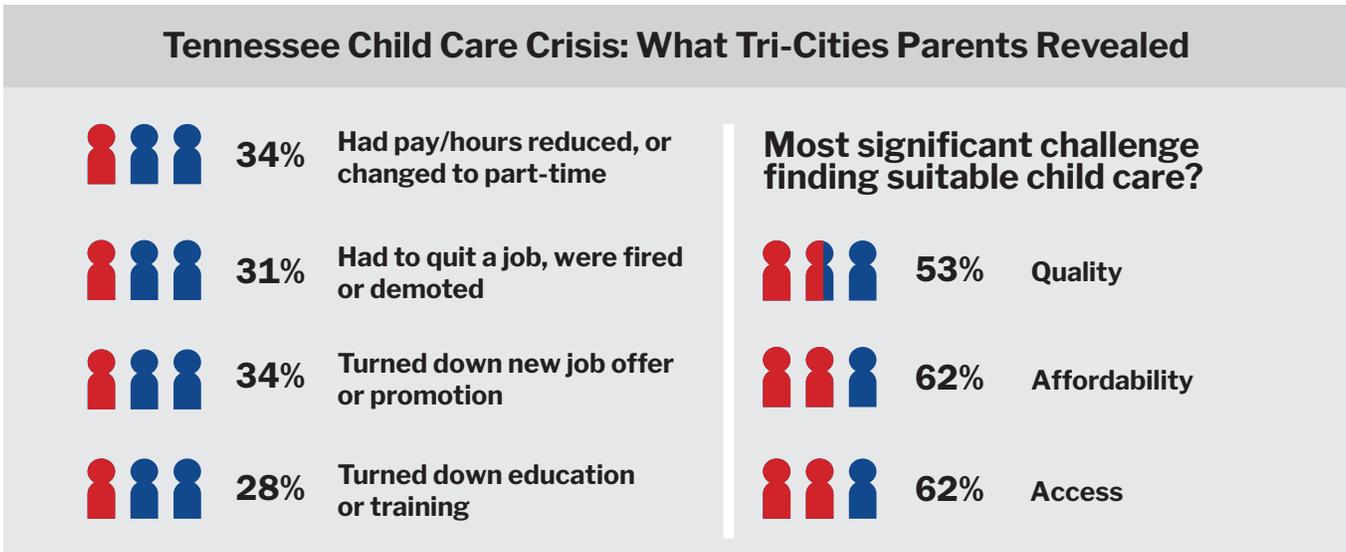

Talk to their employers, and you're likely to hear about workforce recruitment and productivity issues that will only worsen as the state's child care crisis continues.

The top-line findings of a new study that examined adverse economic impacts of inadequate child care on Tennessee parents, businesses, and taxpayers reveal the consequences for Tri-Cities: **\$43 million annually in lost earnings and revenue.**

The study, conducted by Tennesseans for Quality Early Education (TQEE), surveyed Tennessee parents of children under age 5 and modeled how the state's economy is affected by child care.¹ An overwhelming 98% of the Tri-Cities parents said inadequate child care hurt their work productivity and/or career opportunities. Productivity challenges affect both employer and employee.

What's causing the problem? When parents were asked about the most significant child care challenges, half cited difficulty finding child care that is high quality; 62% cited affordability; and 62% cited access (such as finding care that has open slots or accommodates a work schedule outside M-F daytime hours).

Child care problems are not unique to Tri-Cities. The TQEE study revealed a crisis across the state, from Memphis to Mountain City. National business organizations such as the U.S. Chamber of Commerce,² The Conference Board's Committee for Economic Development,³ and ReadyNation⁴ have all issued recent reports highlighting the urgent need to address the nation's child care crisis.

The evidence is clear and the stakes are high. It's time for a child care overhaul in Tennessee. Our intention is for this report to be a springboard for collaborative problem-solving by state policymakers and the private sector to optimize child care for affordability, quality, and access.

Most parents of young children are in the workforce and need child care

In Tennessee, more than 300,000 children (66%) under the age of 6 have all available parents in the workforce, with the Tri-Cities' share being 21,794.⁵ About a third of surveyed families rely on formal center-based care, Head Start or school-based PreK . Others cobble together multiple arrangements and rely on informal and often unlicensed care, with 48% relying on family members for at least part of the time.

Parents need child care so they can go to work, earn a living for their families, and build successful careers. To be productive at work, they also need to know that the care provides a safe, nurturing environment that supports their child's development and early learning.

The current child care system does not meet the needs of families or employers

Several interrelated challenges render Tennessee’s child care system lacking.

Access: Two-thirds of Tri-Cities parents reported problems accessing suitable child care, meaning care that is available outside Monday-Friday daytime hours, can accommodate changing shifts, has open slots, is in a convenient location, or offers backup/sick child care. In fact, 48% percent of Tennesseans live in a child care desert — a census tract where there are more than 3 times as many children as licensed child care slots.⁶ Exacerbating the problem in the Tri-Cities is the fact that the number of child care providers declined between 2010 and 2016 — from 569 to 563 market-based child care providers.⁷

Affordability: Two-thirds of Tri-Cities parents reported affordability as a significant challenge for securing child care to support their employment. Only 11% reported receiving financial support for child care from either their employer or from the Tennessee Child Care Payment Assistance Plan. The cost of center-based care for an infant in Tennessee is \$8,524 per year, nearly as much as public college tuition at \$9,789. Add a 4-year old and the cost rises to \$15,814. This is 20.9% of the median income of a married family and 60.4% if that family lives in poverty.⁸ This high cost makes child care unaffordable for many of The Tri-Cities hard-working families.

Quality: Over half of Tri-Cities parents reported finding quality care as a major problem impacting their employment. Of the 563 child care providers in Tri-Cities, only 249 are licensed by TDHS or certified by Tennessee Department of Education.⁹ Even when providers are licensed, participation in Tennessee’s Star Quality Rating System is optional. Furthermore, the system’s highest rating of 3 stars does not meet key quality standards included for national accreditation by the National Association for the Education of Young Children (NAEYC), a widely acknowledged gold standard for high quality practices in child development and early learning. Only 4 of the 249 licensed or certified child care programs in the Tri-Cities are accredited by NAEYC.¹⁰ And no family child care home-based providers are accredited by NAEYC’s sister organization: the National Association for Family Child Care (NAFCC).¹¹

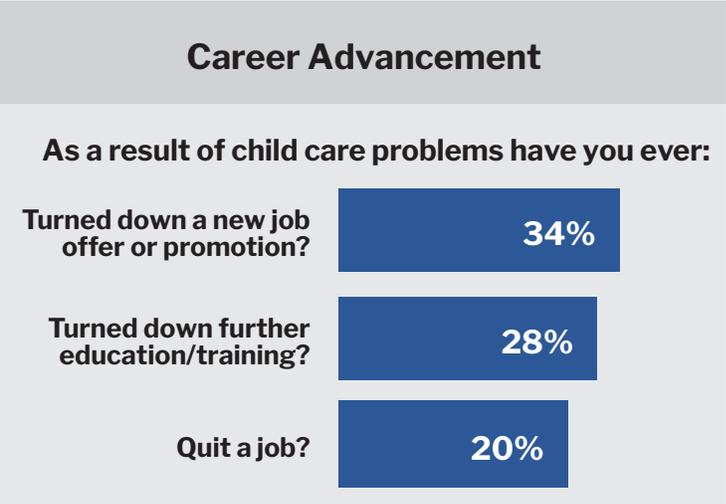

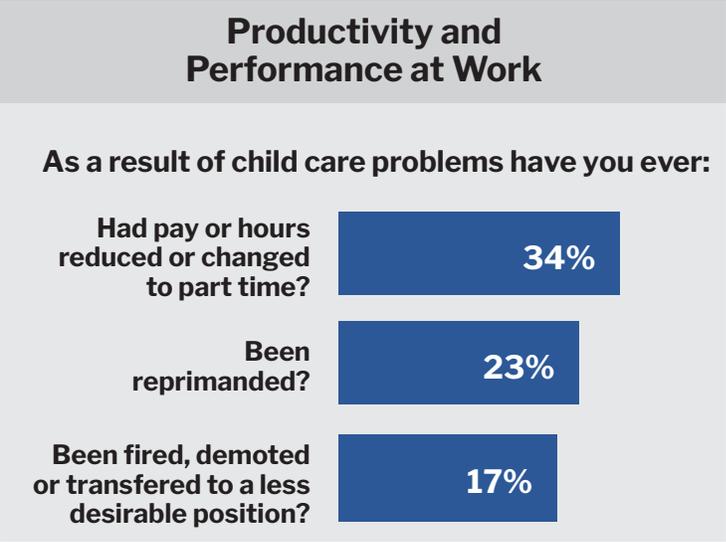

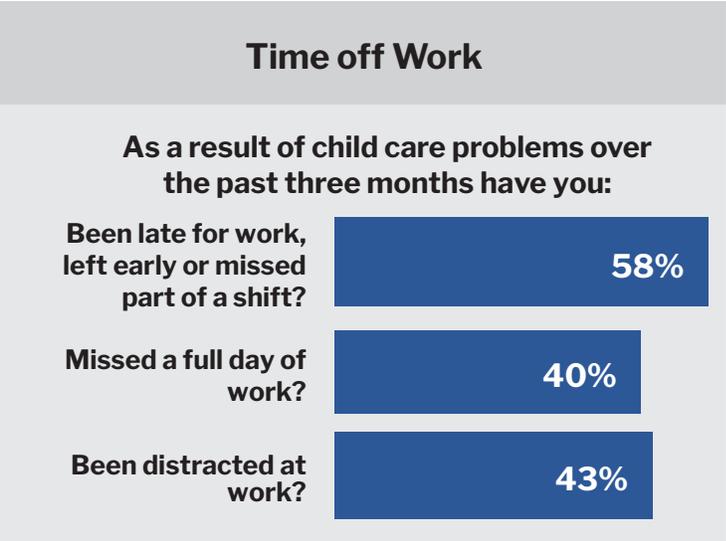

How inadequate child care adversely impacts parents, employers, and taxpayers

When families do not have the child care they need, parents' work productivity falls, resulting in costs to parents, their employers, and ultimately, taxpayers. The survey results provide a window into how the economic impacts occur.

Parents. Parents reported that child care problems affected their time and productivity at work and diminished their career opportunities. The primary consequence is reduced earnings; and with less training and less experience there are lost future earnings as well. **The result: Tri-Cities working parents and their families lose a whopping \$28 million per year.**

Employers. For employers, insufficient child care results in reduced revenue, potentially significant increases in hiring and retention costs, and lost profits. A workforce with lower productivity and shorter tenure has major economic consequences: if an employer's workforce keeps changing, worker morale may fall, product quality may diminish, and clients may be lost. As well, there are immediate direct costs associated with recruitment, hiring, and training as the workforce turns over. There are also future losses and costs when workers are not well-trained and have too little experience. **The lost revenue to the Tri-Cities businesses due to child care problems for parents of young children is \$9 million per year.**

Taxpayers. The economic impact of the child care crisis on parents and employers results in lower earnings, lower consumption of taxable goods, lower profit margins and ultimately, lower tax revenues. **As a result, the Tri-Cities taxpayers lose \$7 million per year.**

The time is right for Tennessee’s leaders to solve our state’s child care crisis.

The practical and economic consequences of inadequate child care are enormous. The economic impact of \$1.34 billion annually for Tennessee and \$43 million annually for Tri-Cities highlighted in this report is just the tip of the iceberg.

A massive body of research has documented impressive returns on investment for high quality early education programs of \$7-13 for every \$1 invested from longer-term positive effects on employment, health, criminal activity, and dependence on government assistance.¹² Improving quality, affordability, and access could have a dramatic impact on the Tri-Cities workforce of today, workforce of tomorrow, and future economic prosperity.

“There’s a ‘triple bottom line’ for high-quality child care. Not only is it a major factor for workforce and business productivity; it also supports economic mobility for families, while helping close the skills gap so young children are prepared for success in school.”

The good news is that Tennessee has significant unspent resources — nearly \$1 billion over the past 5 years — which, if redirected more effectively, could go a long way towards supporting innovative new solutions. The federal government supports families’ need for child care with funding to states (e.g. the Child Care and Development Block Grant, Temporary Assistance to Needy Families) and through the tax code. Much of this and other resources have been underutilized in Tennessee for many years, and could be deployed more strategically to address quality, affordability and access.¹³ Tennessee is in a uniquely strong position with existing money and other resources available to start fixing the child care crisis.

The solution will require ingenuity and collaboration between the public and private sectors. Challenges to be addressed include: the high costs of operating a quality child care business, the skills gap in the child care workforce, and data management at all levels of the child care system, from state administration to classrooms.

While government leadership is crucial, businesses have a role to play as well, deploying creative solutions from on-site child care to helping employees pay for child care with pre-tax dollars. In fact it is worth noting that more than 1 in 3 Tennessee parents surveyed said they are dissatisfied with their employer’s support for their child care needs, suggesting that those offering greater support may have a competitive advantage.

Fixing the problem begins with making it a priority. The solutions will come from well-organized and collaborative problem-solving by state policymakers and the private sector. The time to act is now.
